

Peer Perspectives....

It's really important to have a good wettable sulfur to use.

It's one of a few things that can be used on organic crops but we also use a lot on conventional plants until bloom.

Bill Oldham is with Ag Unlimited in Northern California and has been a PCA since 1983, and a CCA since 2010. He got his Masters in Plant Protection and Pest Management from UC Davis in 1982.

Over the years Bill has had a lot of experience with micronized sulfur products. This year, Bill started working with Cosavet-DF® Edge and has been very pleased with the performance.

"We used it on Pears early in the season for scab issues, and used a lot on grapes this year for powdery mildew. It's a really good, affordable product, says Bill. It's one of a few things that can be used on organic crops but we also use a lot on conventional plants until bloom. Cosavet-DF Edge is compatible if desired, goes into solution easily, stays in suspension and does not clog filters."

Bill noted the importance of a reliable mildew program in the spring when they have rainy periods.

"It's really important to have a good wettable sulfur to use; dust just doesn't work in those conditions." Bill and his customers have been happy with Cosavet-DF Edge - I hope to get others using it as well!"

Bill Oldham

Cosavet-DF is a registered trademark of Sulfur Mills Ltd.
