RATES OF APPLICATION - SUGARBEET

When applying the following recommendations for SPIN-AID® Herbicide to sugarbeets, add HSMOC at 1.0 to 1.5pt/A.

By Ground: Multiple applications of SPIN-AID[®] Herbicide may be applied by ground to sugarbeets to control common lambsquarters and kochia. Broadcast Application rates are provided in appropriate charts in this section. The first application MUST NOT be applied before the sugarbeets have reached the 2-leaf stage. The Spin-Aid rate is adjusted for sugarbeet crop stage to ensure crop safety. For broadcast applications with ground equipment, apply in 20 to 30 gallons of water per acre. To completely control the targeted weeds, a second application timed to 5 to 7 days after the first application is REQUIRED. A maximum of three (3) applications are allowed and not to exceed a total of 3 qts/A.

For further information, contact Belchim Crop Protection USA: info.usa@belchimusa.com

USE PRECAUTIONS

DO NOT APPLY SPIN-AID® HERBICIDE TO SUGARBEETS LATER THAN 75 DAYS PRIOR TO HARVEST.

For sugarbeets, leave a 16 foot buffer from the application area when the wind direction is toward sensitive dicot plants.
